## 1 HTTP Wireshark Lab

### 1.1 The Basic HTTP GET/Response Interaction

1. Is your browser running HTTP version 1.0 or 1.1? What version of HTTP is the server running?

- Both my browser and the server are running HTTP version 1.1.

The screenshot shows two network captures in Wireshark:

- HTTP GET Request:** Frame 55 (highlighted in blue).
  - Request Method: GET
  - Request URI: /wireshark-labs/HTTP-wireshark-file1.html
  - Request Version: HTTP/1.1
  - Host: gaia.cs.umass.edu
  - Connection: keep-alive
  - Upgrade-Insecure-Requests: 1
  - User-Agent: Mozilla/5.0 (X11; Linux x86\_64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/88.0.4324.150 Safari/537.36
  - Accept: text/html,application/xhtml+xml,application/xml;q=0.9,image/avif,image/webp,image/apng,\*/\*;q=0.8,application/signed-exchange;v=b3;q=0.9
  - Accept-Encoding: gzip, deflate
  - Accept-Language: en-US,en;q=0.9
- HTTP Response:** Frame 57 (highlighted in blue).
  - Response Version: HTTP/1.1
  - Status Code: 200 [Status Code Description: OK]
  - Date: Thu, 04 Mar 2021 04:12:19 GMT
  - Server: Apache/2.4.6 (CentOS) OpenSSL/1.0.2k-fips PHP/7.4.14 mod\_perl/2.0.11 Perl/v5.16.3
  - Last-Modified: Wed, 03 Mar 2021 06:59:01 GMT
  - ETag: "80-5bc9c62c44dfe"
  - Accept-Ranges: bytes
  - Content-Length: 128
  - Keep-Alive: timeout=5, max=100

2. What languages (if any) does your browser indicate that it can accept to the server?

- My browser indicates that it accepts US English.

```

Hypertext Transfer Protocol
  GET /wireshark-labs/HTTP-wireshark-file1.html HTTP/1.1\r\n
    [Expert Info (Chat/Sequence): GET /wireshark-labs/HTTP-wireshark-file1.html HTTP/1.1\r\n]
      Request Method: GET
      Request URI: /wireshark-labs/HTTP-wireshark-file1.html
      Request Version: HTTP/1.1
      Host: gaia.cs.umass.edu\r\n
      Connection: keep-alive\r\n
      Upgrade-Insecure-Requests: 1\r\n
      User-Agent: Mozilla/5.0 (X11; Linux x86_64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/88.0.4324.150 Safari/537.36\r\n
      Accept: text/html,application/xhtml+xml,application/xml;q=0.9,image/avif,image/webp,*/*;q=0.8,application/signed-exchange;v=b3;q=0.9\r\n
      Accept-Encoding: gzip, deflate\r\n
      Accept-Language: en-US,en;q=0.9\r\n

```

- 3. What is the IP address of your computer? Of the gaia.cs.umass.edu server?

```

  • My IP address is 192.168.1.127, while the server's IP address is 128.119.245.12.

    [+] Internet Protocol Version 4, Src: 192.168.1.127, Dst: 128.119.245.12

      \r\n
    [HTTP response 1/2]

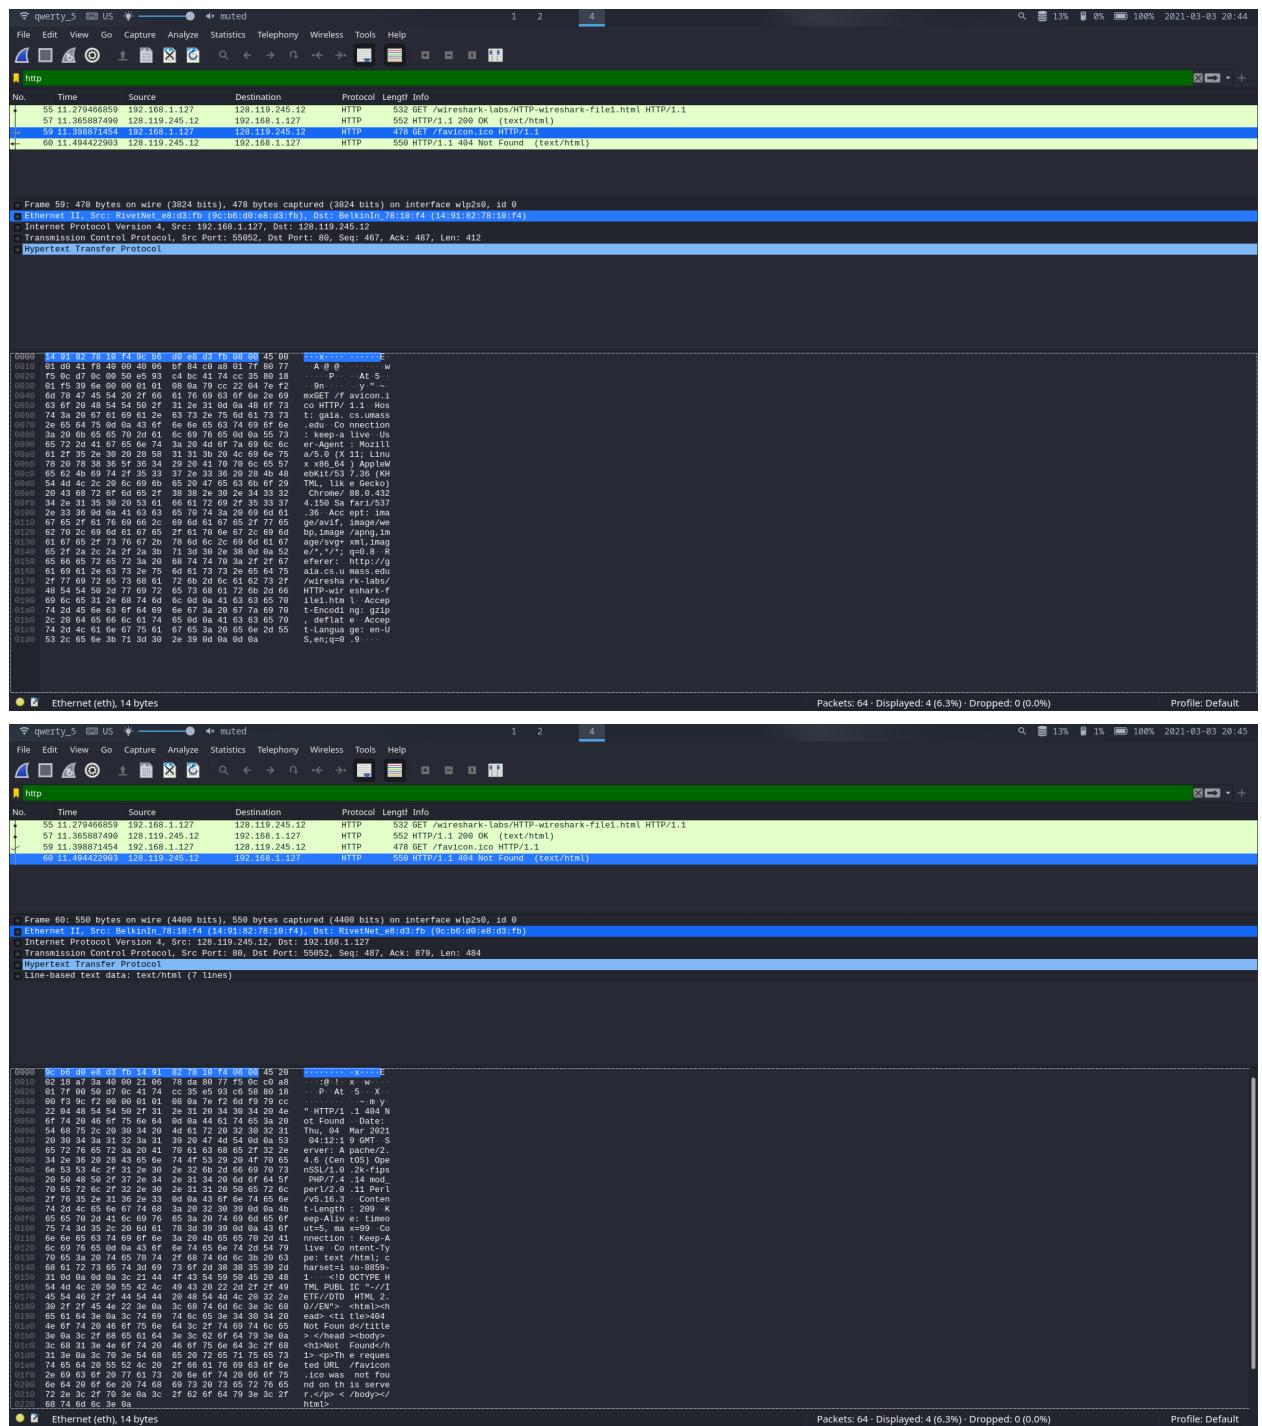

● [+] Hypertext Transfer Protocol
  [+] HTTP/1.1 404 Not Found\r\n
    [+] [Expert Info (Chat/Sequence): HTTP/1.1 404 Not Found\r\n]
      Response Version: HTTP/1.1
      Status Code: 404
      [Status Code Description: Not Found]
      Response Phrase: Not Found
      Date: Thu, 04 Mar 2021 04:12:19 GMT\r\n
      Server: Apache/2.4.6 (CentOS) OpenSSL/1.0.2k-fips PHP/7.4.14 mod_perl/2.0.11 Perl/v5.16.3\r\n
    [+] Content-Length: 209\r\n
      Keep-Alive: timeout=5, max=99\r\n
      Connection: Keep-Alive\r\n
      Content-Type: text/html; charset=iso-8859-1\r\n
      \r\n
    [HTTP response 2/2]
    [Time since request: 0.095551449 seconds]

```

7. By inspecting the raw data in the packet content window, do you see any headers within the data that are not displayed in the packet-listing window? If so, name one.

- I do not see any headers that are not displayed.

## 1.2 The HTTP CONDITIONAL GET/response interaction

- Inspect the contents of the first HTTP GET request from your browser to the server. Do you see an “IF-MODIFIED-SINCE” line in the HTTP GET?

- I do not see an “IF-MODIFIED-SINCE” line in the HTTP GET.

```

Hypertext Transfer Protocol
  GET /wireshark-labs/HTTP-wireshark-file2.html HTTP/1.1\r\n
  Host: gaia.cs.umass.edu\r\n
  Connection: keep-alive\r\n
  Upgrade-Insecure-Requests: 1\r\n
  User-Agent: Mozilla/5.0 (X11; Linux x86_64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/88.0.4324.150 Safari/537.36\r\n
  Accept: text/html,application/xhtml+xml,application/xml;q=0.9,image/avif,image/webp,image/apng,*/*;q=0.8,application/signed-exchange;v=b3;q=0.9\r\n
  Accept-Encoding: gzip, deflate\r\n
  Accept-Language: en-US,en;q=0.9\r\n
\r\n
[Full request URI: http://gaia.cs.umass.edu/wireshark-labs/HTTP-wireshark-file2.html]
[HTTP request 1/2]
[Response in frame: 85]
[Next request in frame: 86]

```

- 9. Inspect the contents of the server response. Did the server explicitly return the contents of the file? How can you tell?

- The server explicitly returned the contents. I can tell because the response contains the HTML file content, and content fields like “Content-Type” and “Content Length” are set.

```

Connection: Keep-Alive\r\n
Content-Type: text/html; charset=UTF-8\r\n
\r\n
[HTTP response 1/2]
[Time since request: 0.088990448 seconds]
[Request in frame: 83]
[Next request in frame: 88]
[Next response in frame: 89]
[Request URI: http://gaia.cs.umass.edu/wireshark-labs/HTTP-wireshark-file2.html]
File Data: 371 bytes
Line-based text data: text/html (10 lines)
\r\n
<html>\r\n
\r\n
Congratulations again! Now you've downloaded the file lab2-2.html. <br>\r\n
This file's last modification date will not change. <p>\r\n
Thus if you download this multiple times on your browser, a complete copy <br>\r\n
will only be sent once by the server due to the inclusion of the IN-MODIFIED-SINCE<br>\r\n
field in your browser's HTTP GET request to the server.\r\n
</html>\r\n

```

```

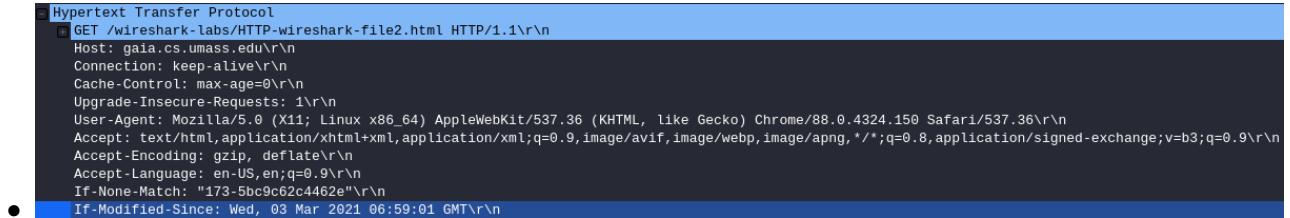

Hypertext Transfer Protocol
  HTTP/1.1 200 OK\r\n
  Date: Thu, 04 Mar 2021 04:59:38 GMT\r\n
  Server: Apache/2.4.6 (CentOS) OpenSSL/1.0.2k-fips PHP/7.4.14 mod_perl/2.0.11 Perl/v5.16.3\r\n
  Last-Modified: Wed, 03 Mar 2021 06:59:01 GMT\r\n
  ETag: "173-5bc9c62c4462e"\r\n
  Accept-Ranges: bytes\r\n
  Content-Length: 371\r\n
    [Content length: 371]
  Keep-Alive: timeout=5, max=100\r\n
  Connection: Keep-Alive\r\n
  Content-Type: text/html; charset=UTF-8\r\n
\r\n
[HTTP response 1/2]
[Time since request: 0.088990448 seconds]
[Request in frame: 83]
[Next request in frame: 88]
[Next response in frame: 89]
[Request URI: http://gaia.cs.umass.edu/wireshark-labs/HTTP-wireshark-file2.html]
File Data: 371 bytes

```

- 10. Now inspect the contents of the second HTTP GET request from your browser to the server. Do you see an “IF-MODIFIED-SINCE:” line in the HTTP GET? If so, what information

follows the “IF-MODIFIED-SINCE:” header?

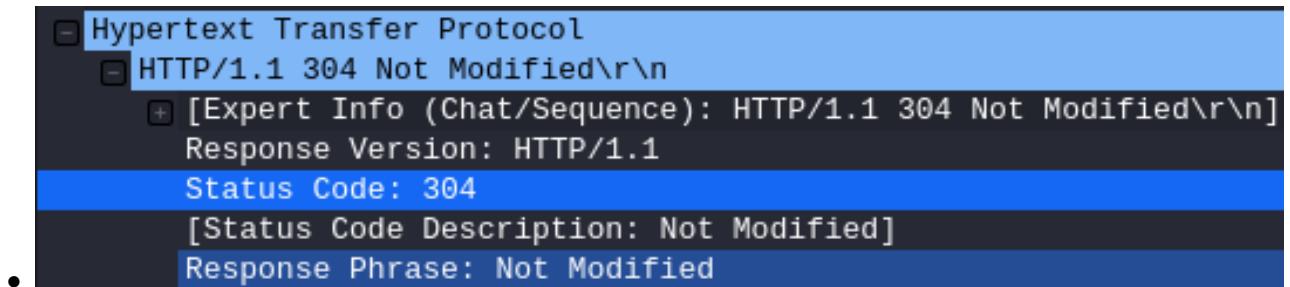

- There is an “If-Modified-Since” line, and it contains “Wed, 03 Mar 2021 06:59:01 GMT”.

A Wireshark screenshot showing an HTTP request. The request is for the URL /wireshark-labs/HTTP-wireshark-file2.html. The 'If-Modified-Since' header is highlighted in blue, containing the value 'Wed, 03 Mar 2021 06:59:01 GMT'. Other headers visible include Host, Connection, Cache-Control, Upgrade-Insecure-Requests, User-Agent, Accept, Accept-Encoding, Accept-Language, and If-None-Match.

11. What is the HTTP status code and phrase returned from the server in response to this second HTTP GET? Did the server explicitly return the contents of the file?

- The HTTP status code is 304 and the response phrase is “Not Modified”. The server did not explicitly return the contents of the file, as none of the signs described in the response to question 9 appeared here.

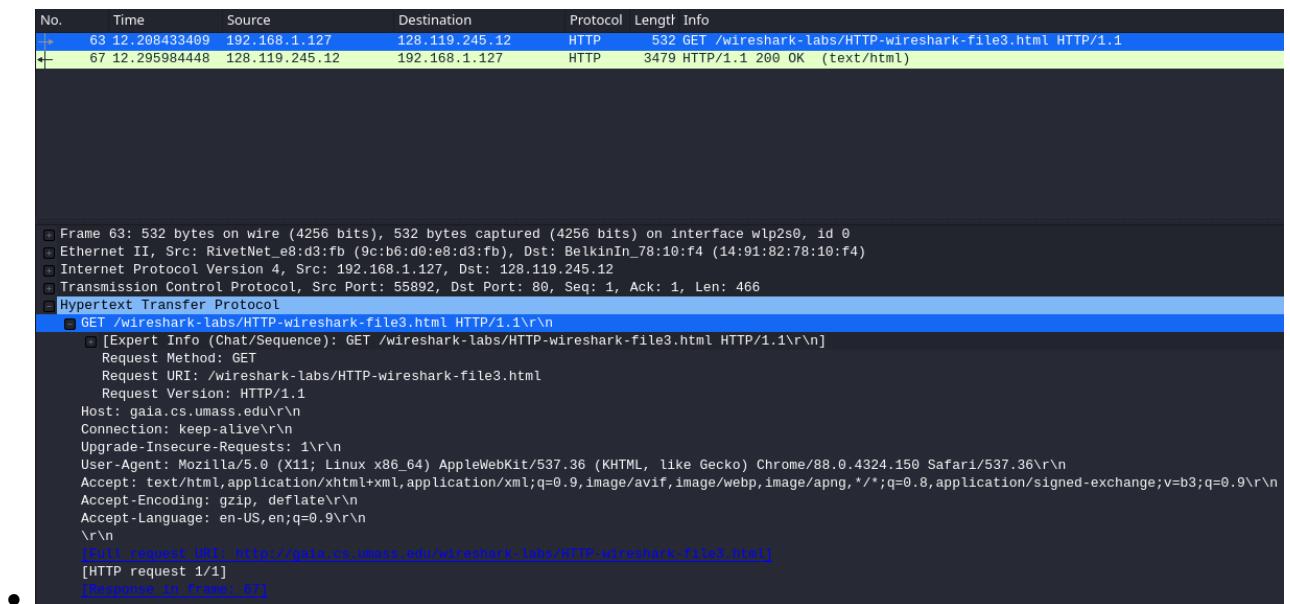

A Wireshark screenshot showing the details of an HTTP response. The status code is 304, which is labeled as 'Not Modified'. The response phrase is also 'Not Modified'. The response version is HTTP/1.1. The expert info shows the full response message: 'HTTP/1.1 304 Not Modified\r\n'. The status code is highlighted in blue.

### 1.3 Retrieving Long Documents

12. How many HTTP GET request messages did your browser send? Which packet number in the trace contains the GET message for the Bill or Rights?

- My browser sent one HTTP GET request. The packet number was 63.

A Wireshark screenshot showing a single HTTP GET request for the URL /wireshark-labs/HTTP-wireshark-file3.html. The packet number is 63. The request method is GET, and the request URI is /wireshark-labs/HTTP-wireshark-file3.html. The request version is HTTP/1.1. The host is gaia.cs.umass.edu, and the connection is keep-alive. The user-agent is Mozilla/5.0 (X11; Linux x86\_64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/88.0.4324.150 Safari/537.36. The accept header includes text/html, application/xhtml+xml, application/xml, image/avif, image/webp, image/apng, \*/\*, and application/signed-exchange;v=b3;q=0.9. The accept-encoding is gzip, deflate, and the accept-language is en-US,en;q=0.9. The full request URI is http://gaia.cs.umass.edu/wireshark-labs/HTTP-wireshark-file3.html.

13. Which packet number in the trace contains the status code and phrase associated with the response to the HTTP GET request?

- The packet number is 65. We see that the response was broken into 2 TCP segments. The raw data of the first segment, packet 65, is highlighted in blue, and we see the HTTP status code and phrase at the top of the raw data.

14. What is the status code and phrase in the response?

- The status code is 200, and the phrase is “OK”.

Hypertext Transfer Protocol  
HTTP/1.1 200 OK\r\nn  
[Expert Info (Chat/Sequence): HTTP/1.1 200 OK\r\nn]  
Response Version: HTTP/1.1  
Status Code: 200  
[Status Code Description: OK]  
Response Phrase: OK

15. How many data-containing TCP segments were needed to carry the single HTTP response and the text of the Bill of Rights?

- 2 data-containing TCP segments were needed.

```

[2 Reassembled TCP Segments (4861 bytes): #65(1448), #67(3413)]
[Frame: 65, payload: 0-1447 (1448 bytes)]

```

## 1.4 HTML Documents with Embedded Objects

16. How many HTTP GET request messages did your browser send? To which Internet addresses were these GET requests sent?

- 3 HTTP GET requests were sent. The first two went to 128.119.245.12 (`gaia.cs.umass.edu`), while the third went to 178.79.137.164 (`kurose.cslash.net`).

89 16.301100606 192.168.1.127	128.119.245.12	HTTP	532 GET /wireshark-labs/HTTP-wireshark-file4.html HTTP/1.1

17. Can you tell whether your browser downloaded the two images serially, or whether they were downloaded from the two web sites in parallel? Explain.

- The images were downloaded serially. The last packet for `pearson.png` (packet 99) arrived before the GET request for `8E_cover_small.jpg` (packet 104) was sent.

93	16.426631679	192.168.1.127	128.119.245.12	HTTP	478	GET /pearson.png HTTP/1.1
99	16.513495514	128.119.245.12	192.168.1.127	HTTP	2229	HTTP/1.1 200 OK (PNG)
104	16.684490700	192.168.1.127	178.79.137.164	HTTP	445	GET /8E_cover_small.jpg HTTP/1.1
108	16.898240272	178.79.137.164	192.168.1.127	HTTP	237	HTTP/1.1 301 Moved Permanently

## 1.5 HTTP Authentication

18. What is the server's response (status code and phrase) in response to the initial HTTP GET message from your browser?

- The server responded with 401 and “Unauthorized”.

```

[+] Hypertext Transfer Protocol
  [+] HTTP/1.1 401 Unauthorized\r\n
    + [Expert Info (Chat/Sequence): HTTP/1.1 401 Unauthorized\r\n]
      Response Version: HTTP/1.1
      Status Code: 401
      [Status Code Description: Unauthorized]
      Response Phrase: Unauthorized
  
```

19. When your browser's sends the HTTP GET message for the second time, what new field is included in the HTTP GET message?

- The “Authorization” and “Cache-Control” fields are new.

```

[+] Hypertext Transfer Protocol
  [+] GET /wireshark-labs/protected_pages/HTTP-wireshark-file5.html HTTP/1.1\r\n
    Host: gaia.cs.umass.edu\r\n

## 2 Web Proxy Cache

This TCP Proxy Server stores its cached websites in a local directory that gets created inside the working directory of the program when the first request is accepted and processed. The main loop waits for the TCP server to receive a client request and has a timeout of 1 second. Its in a try catch nested in an infinite loop to enable the user to interrupt the program with a keyboard interrupt like "ctrl+c". Without implementing this loop and putting a timeout on the TCP Server socket, the proxy server has to be forcibly shut down because the sockets are blocking. When a request is received from the client, a client server socket is generated directly from the `tcpServSock.accept()` function. The message is then decoded and the url, filename and host are extracted from the message. The program then checks the "cached" directory to see if the received file request already exists.

If it exists, the request does not get forwarded to the host server and instead simply responds with the contents of the locally cached file. This cached response shows significantly increased response speeds as compared to true requests from host servers. The responses are stored locally in files, so restarting the program or your computer will not destroy the cached files. They have to either be deleted manually or by the program when it starts.

If the file does not exist in the local cache, a new socket is created on the Proxy Server and connected to the host domain on port 80. A new request is built using the filename and host previously extracted from the client request message. The message is sent in the form "GET *filename* HTTP/1.1 Host: *hostDomain* Connection: Close". The "Close" connection is to force the connection to close rather than the default "keep\_open" Connection type. Once this message is built and sent to the host, the socket waits until it receives a response. Once received, the response is first sent back to the client server to reduce the delay, then the response is stored in a local file in the "cached" directory using the same "filename". Once the message has been both stored in the final and sent to the client then host and client sockets are shutdown and the process repeats.

I have also ensured proper exception handling and a way to compare cached vs noncached times. The times are compared using a dictionary that is created on program run. It stores the time it takes to send a response to the client from the point the connection is created between the client and proxy until a response message is sent using the requests filename as a key. When the server is killed, the results of this dictionary are printed to the console. A bar graph comparing load times can be seen below.

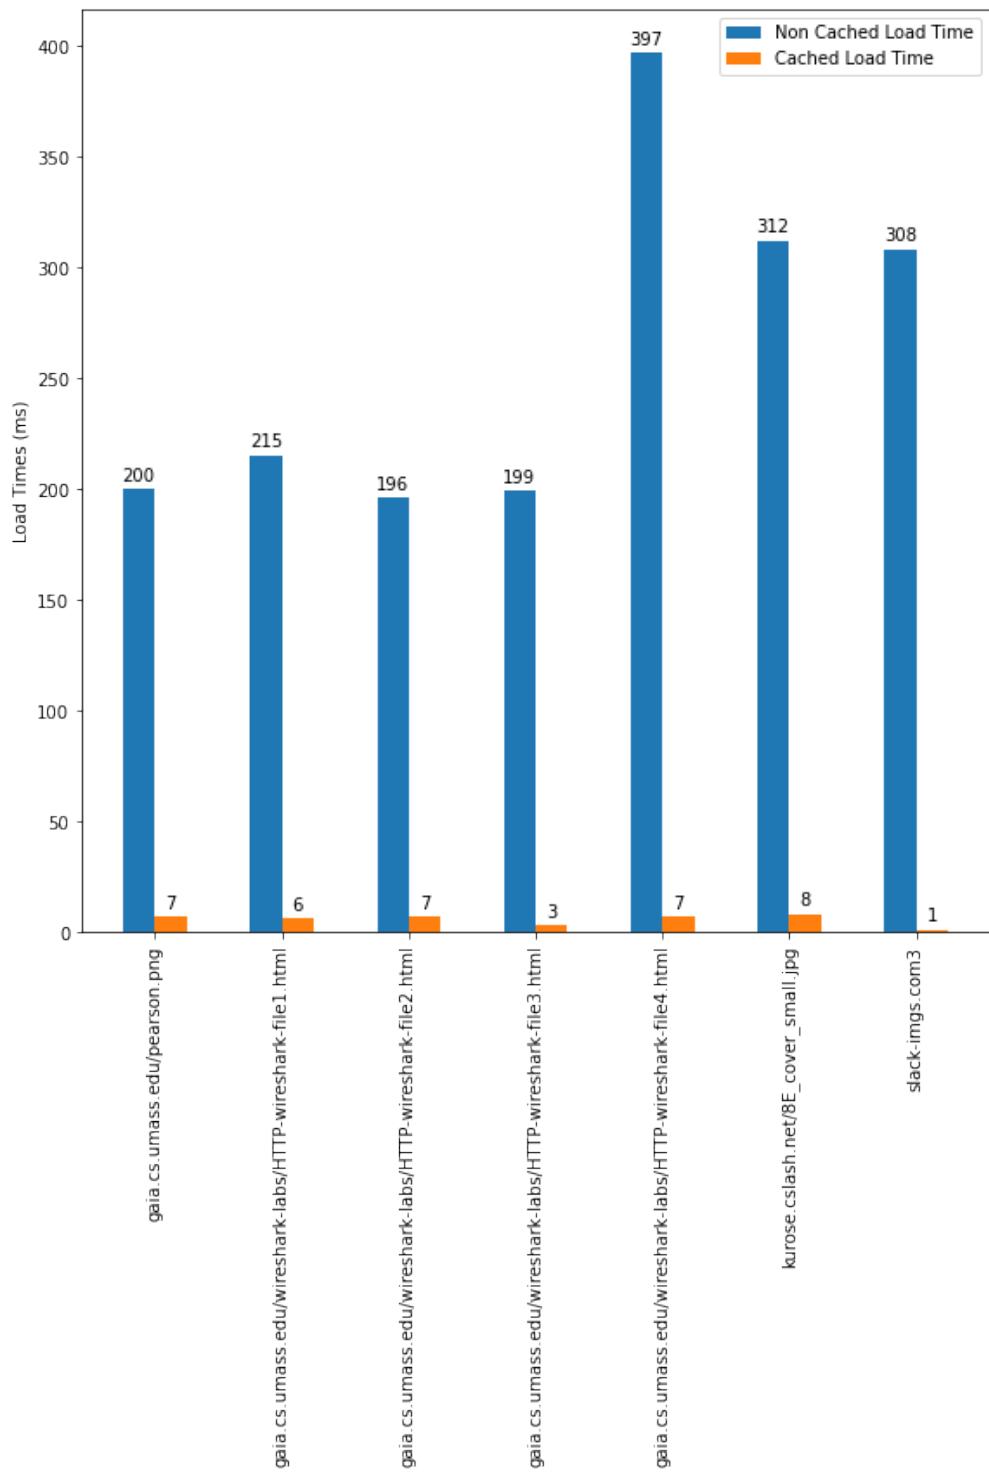

Figure 1: Proxy Server Load Times for Cached and Non Cached Requests

<body bgcolor="#ffffff" link="#330000" vlink="#666633">
<p><br>
</p><p><center><b>THE BILL OF RIGHTS</b><br>
    <em>Amendments 1-10 of the Constitution</em>
</center>

<p>The Conventions of a number of the States having, at the time of adopting
the Constitution, expressed a desire, in order to prevent misconstruction
or abuse of its powers, that further declaratory and restrictive clauses
should be added, and as extending the ground of public confidence in the
Government will best insure the beneficent ends of its institution; </p><p> Resolved, by the Senate and House of
Representatives of the United
States of America, in Congress assembled, two-thirds of both Houses concurring,
that the following articles be proposed to the Legislatures of the several
States, as amendments to the Constitution of the United States; all or any
of which articles, when ratified by three-fourths of the said Legislatures,
to be valid to all intents and purposes as part of the said Constitution,
namely: </p><p><a name="1"><strong><h3>Amendment I</h3></strong></a>

<p></p><p>Congress shall make no law respecting an establishment of
religion, or prohibiting the free exercise thereof; or
abridging the freedom of speech, or of the press; or the
right of the people peaceably to assemble, and to petition
the government for a redress of grievances.

</p><p><a name="2"><strong><h3>Amendment II</h3></strong></a>

<p></p><p>A well regulated militia, being necessary to the security
of a free state, the right of the people to keep and bear
arms, shall not be infringed.
```

### 3 DNS and dig

- (a) Starting with a root DNS server (from one of the root servers [a-m].root-servers.net), initiate a sequence of queries for the IP address for your department's Web server by using dig. Show the list of the names of DNS servers in the delegation chain in answering your query.
- I followed the DNS servers `a.root-servers.net` → `a.edu-servers.net` → `dns-two.ucdavis.edu`.  
The IP addresses are listed in the last screenshot under “ANSWER SECTION”.
